

## PERFORMANCE & QUALITY

Advances in product design and processes have elevated Williams Downlighting to the forefront with products that offer contractor-friendly installation, efficient operation and long life. Our engineering staff is continually seeking new areas for product improvement. Our goal is to provide superior quality lighting and excellent service.

You can count on the skilled team of professionals behind the Williams Downlighting brand for service and support – from initial design to shipment – Williams Downlighting is backed by performance innovation, value, and service... all adding up to your satisfaction.

## RECESSED PRODUCT FEATURES

Quality aluminum reflector is designed for optimal efficiency while providing low glare illumination for greater visual comfort.

Extruded aluminum heat sink provides superior thermal control for long life of lamps and electrical components.

A variety of options are available that add functionality or meet special needs, such as the yoke mount reflector.

Adjustable mounting brackets allow simple installation with different ceiling thicknesses and different types of ceiling. Bar hangers are optional.

One-piece 20 gauge galvanized steel pan/plaster frame is formed and gusseted for extreme durability.

Self-flanged trims are standard on all reflectors to provide a clean, finished appearance without light leaks.

Williams Downlighting is available with a variety of lamp types including incandescent, compact fluorescent, HID, and induction – in a large selection of wattages.

Reflectors are available in a variety of colors – see page 289 for selection.

Recessed lens, wall wash, baffles, luminous glass disk (shown), and other options are available for distinctive, custom appearance – see page 289-290.

Easy-access 14 gauge galvanized steel junction box with two snap-on covers.

Sloped Ceiling Adaptor or Retrofit Mounting Pan are available for added versatility. See page 291 for more information.

UL listed to U.S. and Canadian safety standards.
