

INFORMATION

CYLINDER FEATURES

The Williams Downlighting Universal Mounting Hub allows the fixture to be pre-installed without the housing to provide temporary lighting and prevent damage to the housing during the final steps of the project.

Quality aluminum reflector is designed for optimal efficiency while providing low glare illumination for greater visual comfort.

Williams Downlighting cylinders are available with a variety of lamp types including incandescent, compact fluorescent, and HID – in a large selection of wattages.

Reflectors are available in a variety of colors – see page 289 for selection.

Self-flanged trims are standard on all reflectors to provide a clean, finished appearance without light leaks.

Universal voltage electronic ballast is standard in compact fluorescent cylinders.

Cylinders are available for surface, pendant, or wall mounting. Up/down cylinders are available for direct/indirect lighting. See page 292 for more information.

Heavy gauge die formed and welded aluminum housing is finished to seamless appearance. Available in a variety of sizes and shapes.

Standard housing colors are bronze, black, or white. Custom colors are available.

UL listed to U.S. and Canadian safety standards.

Recessed lens, wall wash, baffles, luminous glass disk, and other options are available for a distinct, custom appearance.

CYLINDER MOUNTING OPTIONS

The Williams Downlighting Universal Mounting System allows the same style cylinder to be mounted several different ways to fit your specific application. This is a great benefit when coordinating fixtures throughout a building or campus. Custom colors help create unique architectural accents.

Round, square, and octagonal cylinders all feature the same mounting system. See page 292 for more mounting information. Some restrictions apply – refer to cylinder specifications when ordering.

SURFACE
Mount the cylinder directly to the ceiling.

PENDANT
Swivel canopy is available with various stem lengths.

WALL MOUNT
Bracket system allows simple mounting to most vertical surfaces.

UP/DOWN
Wall mounted fixture provides direct/indirect illumination.
