

# INFORMATION

## REFLECTOR COLORS

For an added touch of distinction you may choose a reflector color that will coordinate with the colors of your building's interior and enhance the color characteristics of the lamp source.

Warm reflector colors contribute a warm tone to the illumination — ideal for compact fluorescent sources. Baffles and darker colors diminish aperture brightness. See decorative trim and lens options below.

**Clear Semi-Specular**  
Catalog No. CS

**Straw**  
Catalog No. STR

**Champagne Gold**  
Catalog No. CG
