## SERIES

**HHNR** — Series HHNR is available in 8' to 18' pole heights including a cast aluminum structural base. Choice of straight or tapered smooth round aluminum shafts. The pole is designed to accommodate up to two fixtures on a pole top assembly with a maximum 36" O.C. fixture span.

## HHNR SERIES

**SHAFT** — The pole shaft is either spun or extruded from 6063 alloy aluminum.

**POLE TOP** — A pole top plate and tenon (must specify size) are provided for top mount luminaire or Williams' pole top assembly. A removable finial is available for poles receiving drilling patterns for side-mount luminaire arm assemblies.

### ACCESS DOOR

The structural base includes an access door for easy on-site maintenance.

### STRUCTURAL BASE

The structural base is cast from 356 alloy aluminum. A grounding provision with hardware is provided. The pole is inserted and welded into the structural base casting. The completed assembly is heat-treated to a T6 temper after the structural welding is completed.

<sup>1</sup> Effective Projected Area (EPA) calculations allow for 1.3 Wind Gust Factor. Maximum EPA and weight values are based on top mounted luminaires or arm assembly having a centroid 2'-6" above and 1'-6" eccentric to the pole top at Nominal Mounting Height. Variations from sizes listed above are available upon inquiry. Satisfactory performance of poles is dependent upon the pole being properly attached to a supporting foundation of adequate design. See Williams Outdoor Information Section, page 6, for Load and Dimensional Data specifics.

<sup>3</sup> Structure Weight is a nominal value which includes the pole shaft and structural base.
